Experience the future of spraying with the Flairosol system - an innovative solution for fine misting of liquids, developed by AFA Dispensing:

- **Continuous, high-quality spray:** Patented technology enables consistent and even spraying across large surfaces. Different nozzle types ensure compatibility with your application, from fine misting to a foamy consistency, even for oil-based formulations.
- **Ergonomic & stylish:** A comfortable and effortless spray sensation with excellent branding opportunities. Numerous combinations of (bottle) shapes and colours can be customised through printing, labelling or sleeving for individual accents.
- **Sustainable pioneer:** Without propellants or harmful substances, the non-pressurised system ensures complete emptying. The durable spray (up to 100,000 sprays) and recharge bottle option reduce material use and enhance customer loyalty.
